Executive Summary

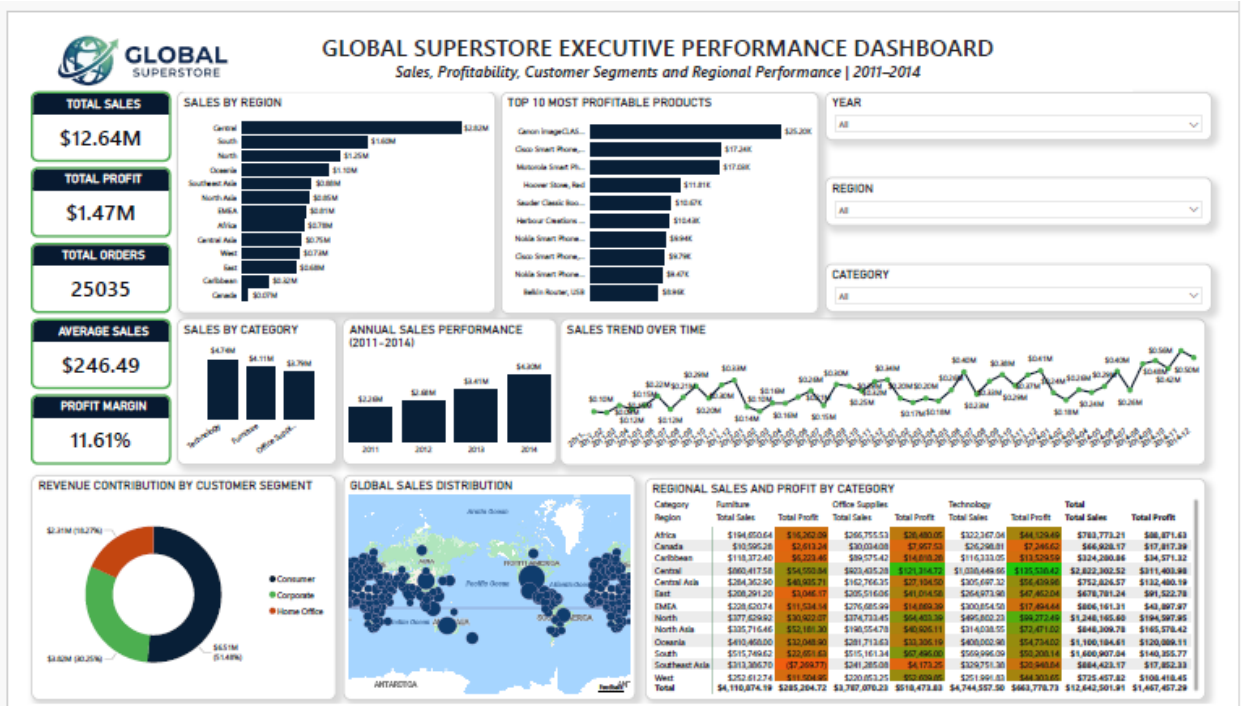

*Global Superstore Sales Performance Analysis | 2011–2014 (BY: **HAMEEDAT ISA-USMAN**)*

Project Objective

This project analyzed Global Superstore's historical sales data using Microsoft Power BI to evaluate sales performance, profitability, customer segments, product categories, and geographic performance.

Overall Performance

The company generated approximately $12.64 million in sales and $1.47 million in profit from 25,035 unique orders, achieving an overall profit margin of 11.61%.

Key Findings

Sales increased from approximately $2.26 million in 2011 to $4.30 million in 2014. The Central region recorded the highest sales and profit. The Consumer segment contributed the largest share of revenue, while Technology was the best-performing product category by both sales and profit.

Furniture recorded comparatively weak profitability despite substantial revenue, indicating a need for further investigation.

Business Risks and Opportunities

The analysis highlights risks relating to weak Furniture margins, regional profitability differences, and reliance on Consumer revenue. Opportunities include expanding profitable Technology sales, improving Furniture margins, and strengthening Corporate customer relationships.

Recommendations

Management should prioritize profitable Technology products, review Furniture pricing and discount policies, investigate underperforming regions, improve Consumer retention, and develop targeted Corporate sales strategies.

Conclusion

The dashboard provides an interactive view of historical performance, enabling management to identify trends, investigate profitability challenges, and make better-informed business decisions.
